INTEGRATED FACE & WRIST TEMPERATURE MEASUREMENT SYSTEM

Supplied from £1'125.00 plus installation

Part of our Heat-Tracker series, the is an all-in-one system which integrates face recognition technology and non-contact temperature detection technology. It has the function of rapid temperature screening in airports, passenger transport stations, government buildings, financial institutions, hospitals, shopping malls, and other places with large staff turnover to effectively avoid cross-infection.

FEATURES

− Non-contact detection of wrist temperature, with a warning if abnormal body temperature is detected (measurement range is between 30°C to 45°C, measurement accuracy up to ±0.1°C)

− Support voice linkage, real-time alarm of people with fever

− Real-time snapshot of human face during temperature measurement

− Support no mask reminder

− Real-time statistics of total number of temperature measurement, normal and abnormal number of people

− Ideal for communal areas, schools, office buildings, hospitals, banks and other crowded places

− Kit consists of the IP camera, monitor, NVR, stand, and bracket
